

ALLIEDACCESS™ · 1/10

Smart Door Access Platform

Keyless entry, centralized control, and a full audit trail for every door in your property.

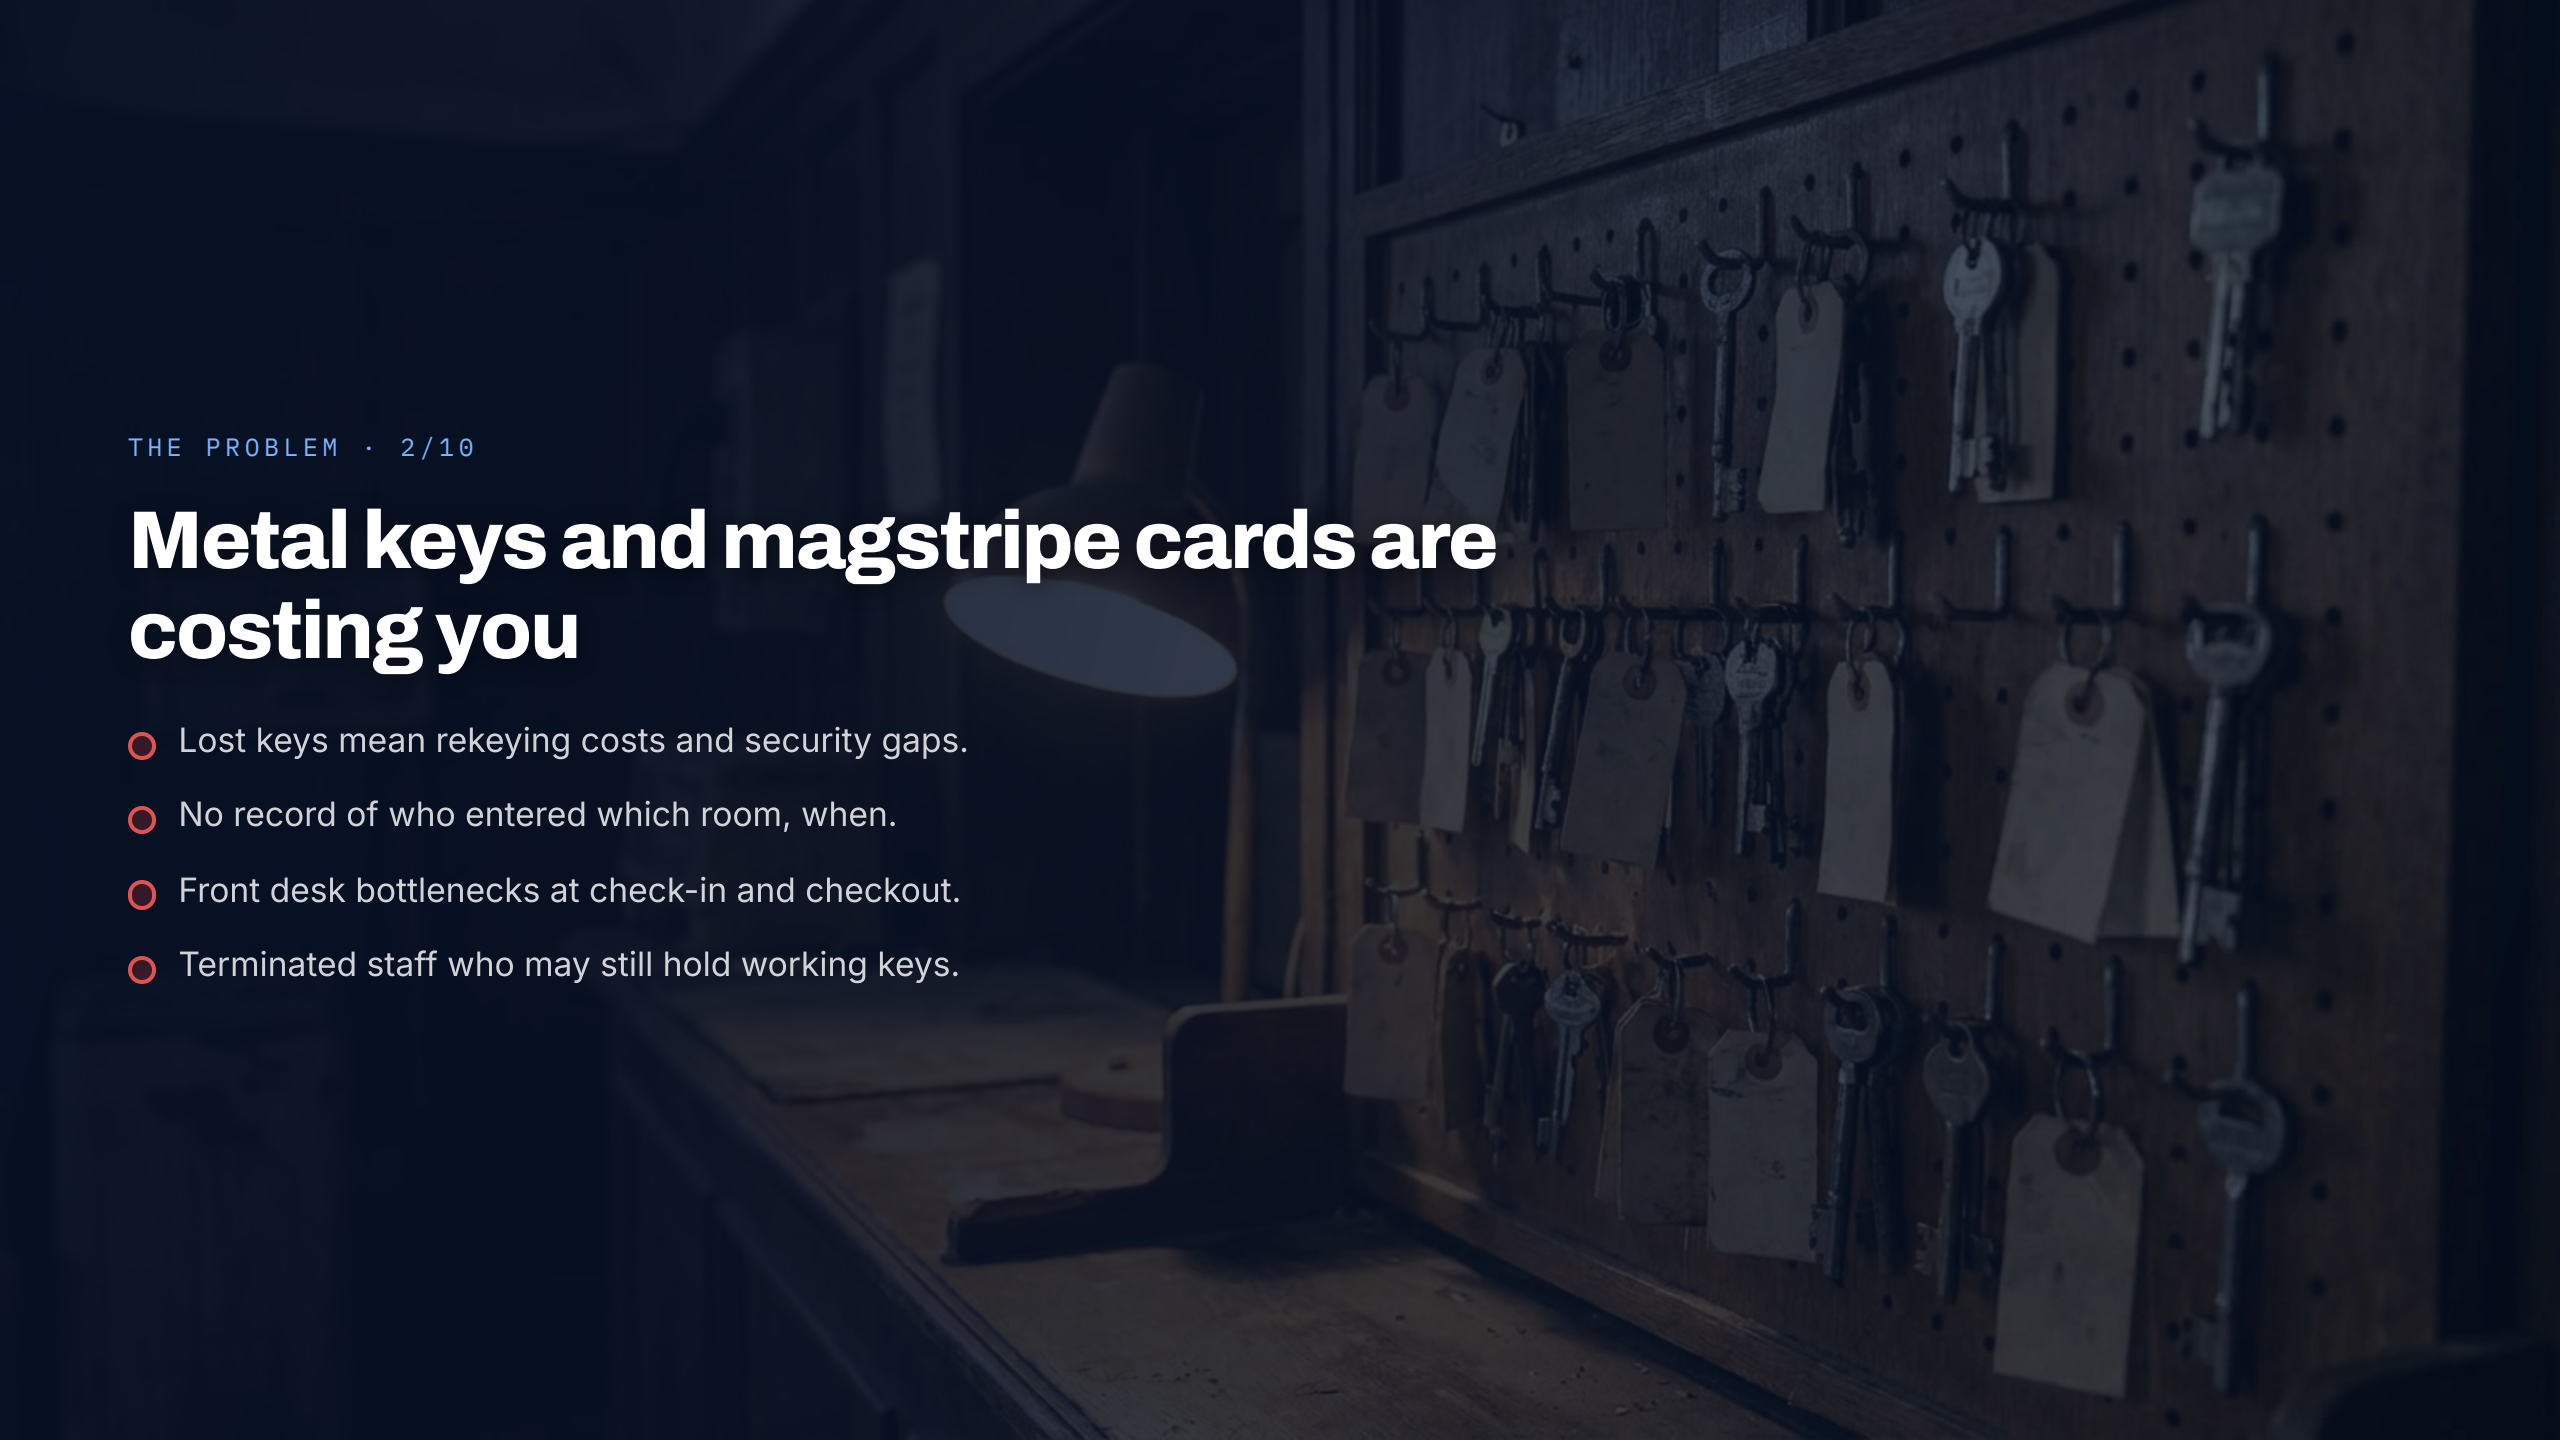

By AlliedTech Solutions Corp.

THE PROBLEM · 2/10

Metal keys and magstripe cards are costing you

- Lost keys mean rekeying costs and security gaps.
- No record of who entered which room, when.
- Front desk bottlenecks at check-in and checkout.
- Terminated staff who may still hold working keys.

THE SOLUTION · 3/10

One platform, three ways in

- **Contactless smart card** — tap to enter, issued at your front desk in seconds.
- **PIN code** — delivered to the guest before arrival, expires automatically at checkout.
- **Mobile key** — optional smartphone entry for a fully contactless stay.

Every credential is time-bound: valid from check-in, dead at checkout. Automatically.

Smart, even when offline

- Credentials are stored inside each lock — doors keep working during internet or power provider outages.
- Wireless access gateways sync each floor to the management cloud for remote issuance and real-time logs.
- Locks run on standard batteries with 10–12 months typical life and low-battery alerts before anything fails.
- Mechanical key override on every lock for emergencies.

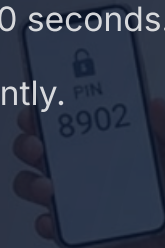

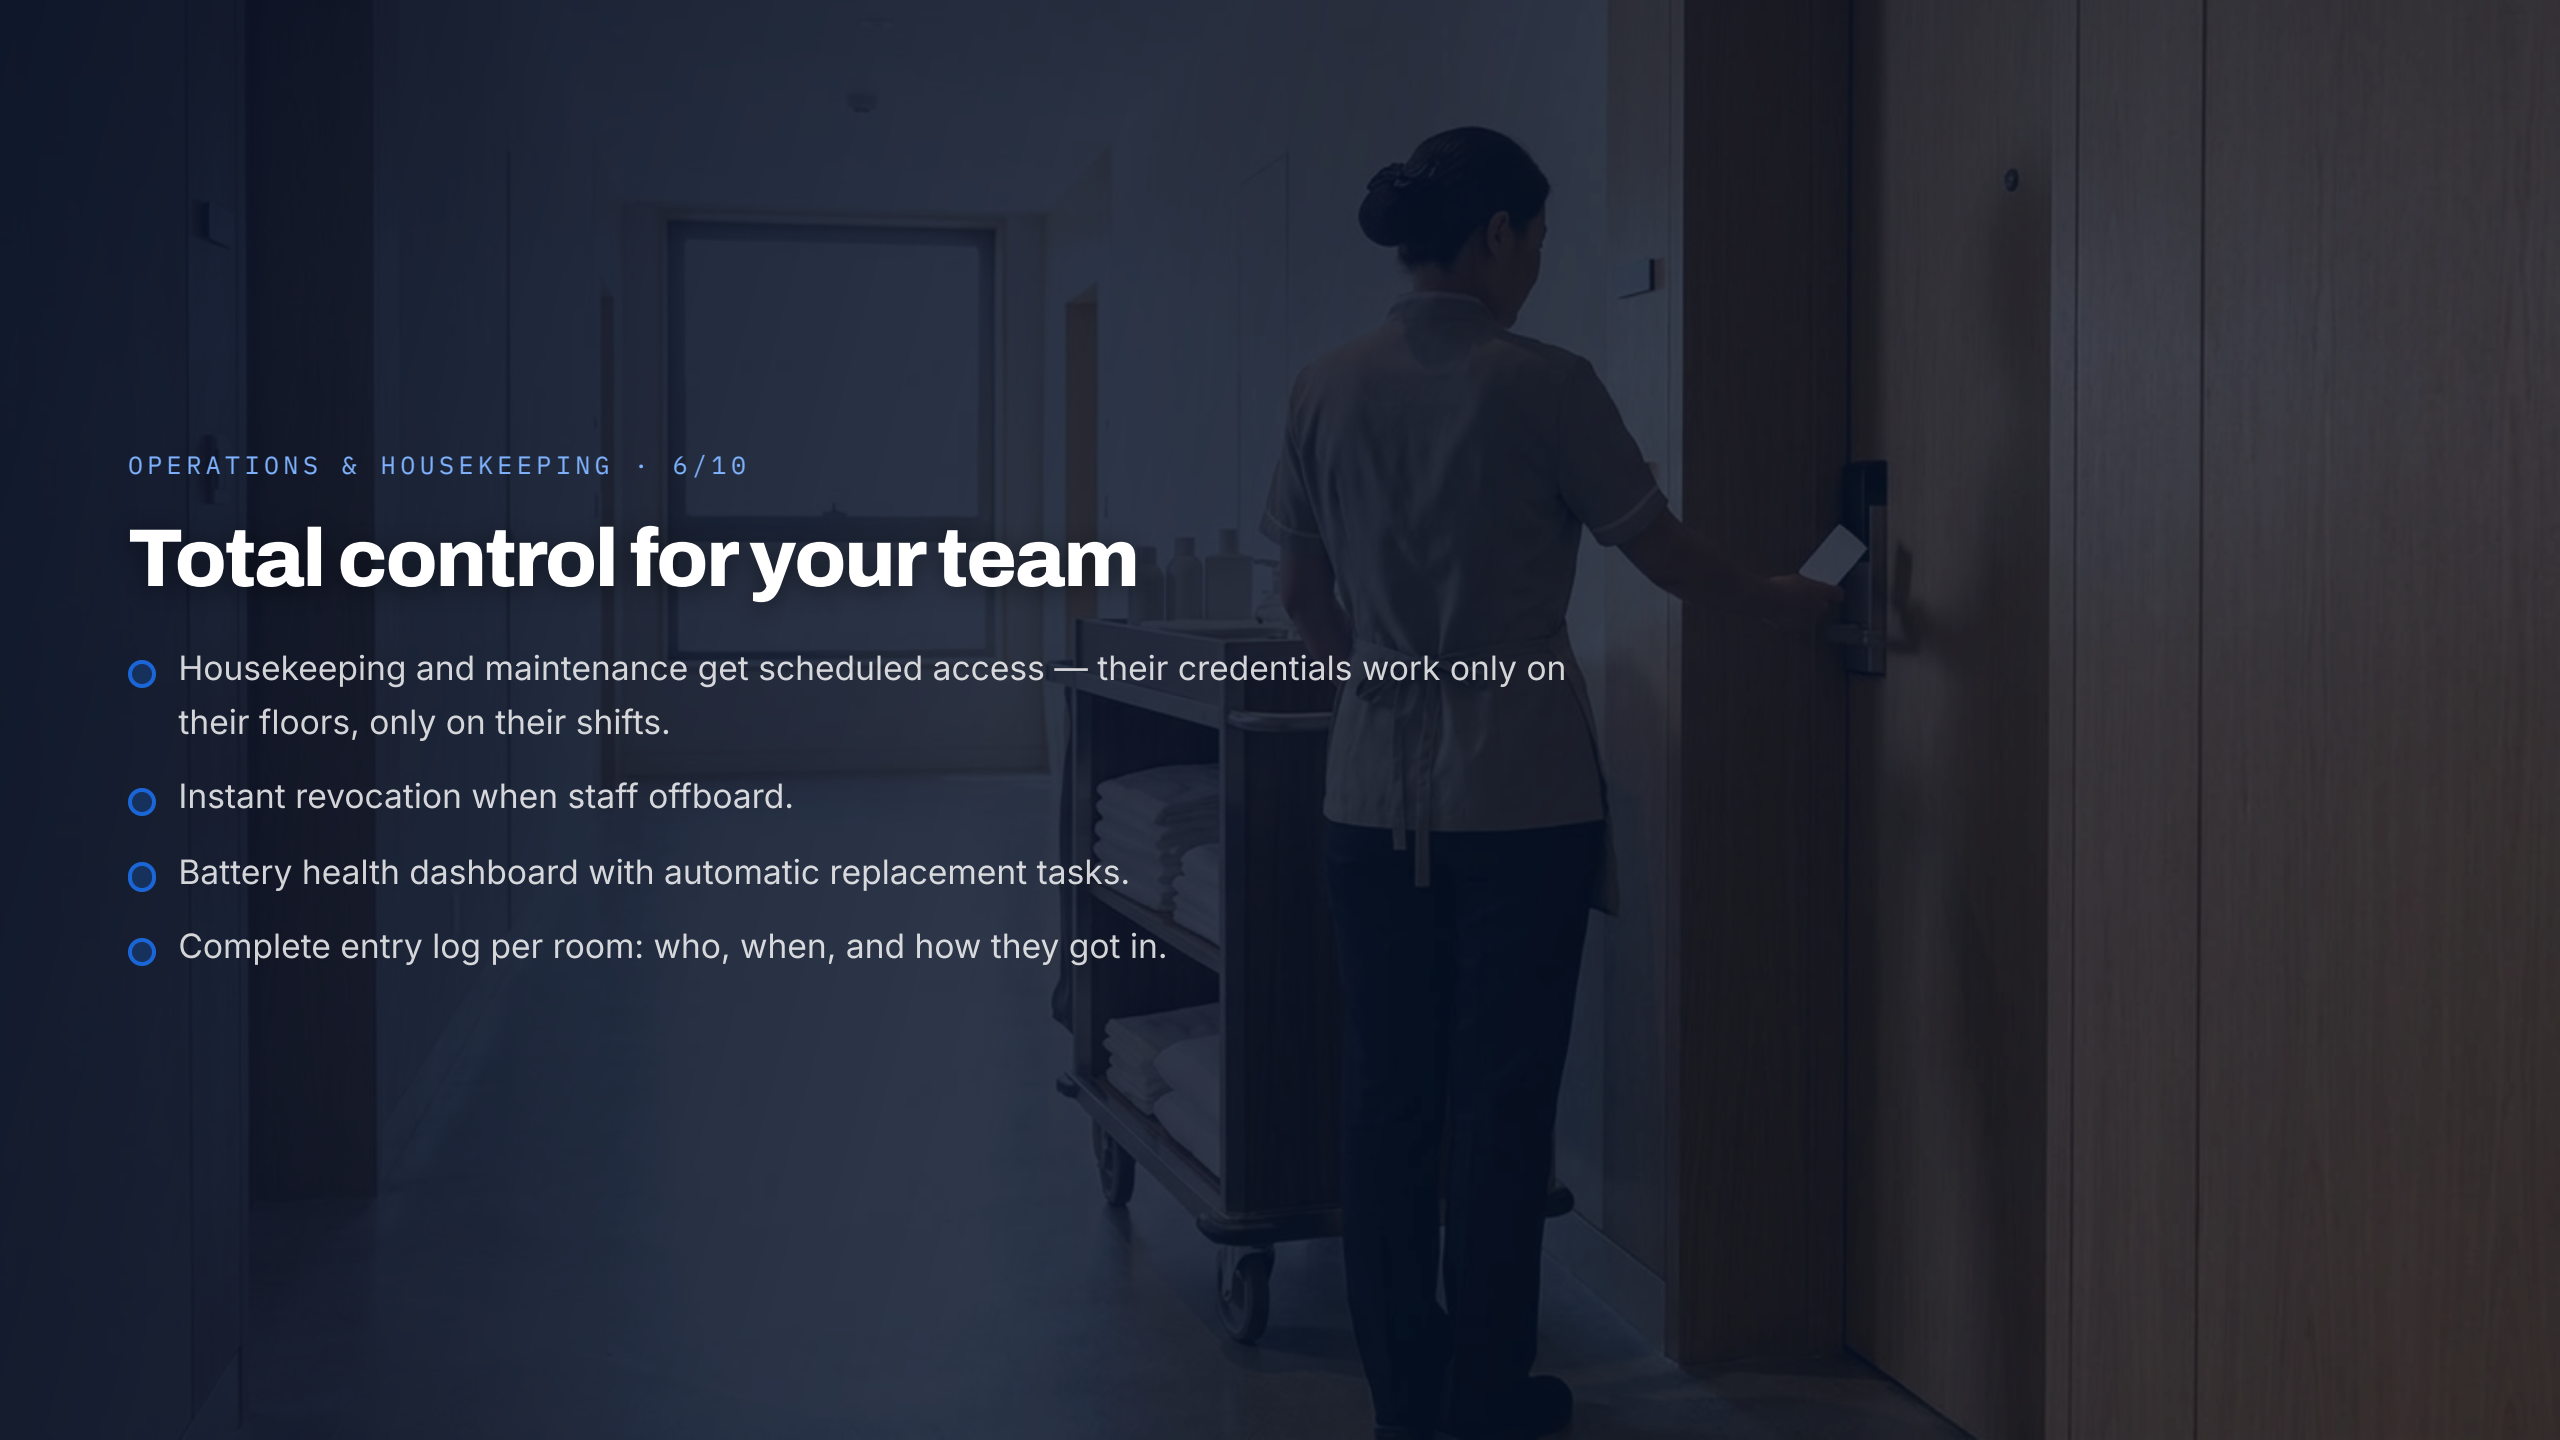

GUEST EXPERIENCE · 5/10

Check-in that feels like 2026

- Booking confirmed → guest receives their room PIN by SMS, email, or messaging app.
- Walk-in? A branded key card is encoded at the desk in under 10 seconds.
- Extending the stay extends the key. Early checkout kills it instantly.

No key deposits. No demagnetized cards. No 2 A.M. lockout calls.

OPERATIONS & HOUSEKEEPING · 6/10

Total control for your team

- Housekeeping and maintenance get scheduled access — their credentials work only on their floors, only on their shifts.
- Instant revocation when staff offboard.
- Battery health dashboard with automatic replacement tasks.
- Complete entry log per room: who, when, and how they got in.

Engineered for hospitality-grade security

- Encrypted credential storage — no plaintext keys anywhere in the system.
- Free mechanical egress from inside every room, compliant with RA 9514 (Fire Code of the Philippines).
- Optional high-security card standard for properties requiring anti-cloning protection.
- Full audit trail retained for management and incident review.

Runs standalone — or inside your PMS

- AlliedAccess includes its own web dashboard: rooms, credentials, staff access, logs, and battery health in one screen.
- Native integration with AlliedPMS, our property management suite: check-in issues the key, checkout revokes it — zero extra steps for your front desk.
- Open to integration with your existing systems.

DEPLOYMENT · 9/10

Live in weeks, not months

- **Step 1:** free site survey — every door measured, network mapped.
- **Step 2:** full rollout at 4–8 rooms per day, floor by floor, around your occupancy.
- **Step 3:** staff training, parallel running, and formal handover.

Installed and supported by AlliedTech engineers — one accountable partner, hardware to software.

PACKAGES · 10/10

Choose your level

ESSENTIALS

Smart locks + card and PIN access + standalone dashboard.

PROFESSIONAL

Everything in Essentials + wireless gateways for remote/real-time control + guest PIN auto-delivery + battery and audit dashboards.

ENTERPRISE

Everything in Professional + full PMS integration + common-area and elevator access + priority SLA with on-site spare pool.

Every package includes site survey, installation, training, and warranty. Request your site survey today — sales@alliedtech.solutions.
